

Hi! My name is Shogo HORIUCHI,

Please call me **Shogo**

(remember like “show and go”).

I'm from Japan!

A robotic arm with a white and grey sleeve and orange cables is positioned above a large, highly reflective spherical detector component. The sphere is covered in a grid of photomultiplier tubes (PMTs) and reflects the surrounding environment, including the robotic arm and the dark, crinkled shielding material. The scene is dimly lit, with some internal lights visible through the sphere's surface.

Currently, I'm working as a **Hyper-Kamiokande** collaborator.

I'm investigating precise PMTs' response.

What I like to do in my free time is a board game especially Catan.

I didn't bring catan here, but I have cards. So let's play together In a free time.
